Django-React Assignment

GitHub Repository

The project repository is available at: https://github.com/khushalkhan05/django-react-assignment

Description

This project is a simple web application built with Django and React. The backend, created with Django, includes two API endpoints:

- **GET /api/get/**: Returns a welcome message.

- **POST /api/post/**: Receives data and returns a confirmation response.

The React frontend interacts with these endpoints to display the welcome message and send data via a form.

How to Run

1. Clone the repository.

2. Follow the instructions in the README.md to set up and run the Django and React applications.

3. Use the Ngrok URL provided in the README to interact with the Django API.
